

LCC Domain Meals Report - Technical Documentation

Overview

The LCC Domain Meals Report is a standalone static HTML dashboard generated from Dataverse data and prepared for GitHub Pages publication.

Project Paths

- Working folder: C:\DEV_Workspace\LCC_all\Report extern LCC Domain from Dataverse
- Source reference: C:\DEV_Workspace\LCC_all\Report extern LCC Domain from excel
- Pattern reference: C:\DEV_Workspace\LCC_all\Report extern SUN Domain
- System runtime: C:\DEV_Workspace\LCC_all\Systemfiles

Dataverse Source

- Org URL: <https://org1afb89f7.crm4.dynamics.com>
- Participant table: new_mealparticipants
- Scan log table: new_mealscanlogs

The report no longer reads Meals_Database_Master1.xlsx. dataverse_export_report_data.ps1 reads both Dataverse entity sets through the Dataverse Web API and returns JSON to gen_meals_report.py.

Field Mapping

Participant rows:

Scan log rows:

The exporter probes optional columns before querying. This keeps the report stable when legacy columns such as new_legacypowerappsids are absent.

Runtime Flow

1. gen_meals_report.py starts.
2. It calls dataverse_export_report_data.ps1.
3. The PowerShell script authenticates through service-principal variables or interactive Microsoft login.
4. Dataverse rows are normalized to the legacy report field names.
5. Meals_Report_py.html is generated.
6. index.html is updated for GitHub Pages.

Local Commands

Generate once:

```
python .\gen_meals_report.py --no-serve  
Copy-Item .\Meals_Report_py.html .\index.html -Force
```

Generate with offline fallback:

```
python .\gen_meals_report.py --no-serve --offline-fallback  
Copy-Item .\Meals_Report_py.html .\index.html -Force
```

Run monitored automation without publishing:

```
powershell -NoProfile -ExecutionPolicy Bypass -File .\run_report_automation.ps1 -NoPublish
```

Automation

- Monitor server: monitor_server.py
- Monitor URL: <http://127.0.0.1:8767/>
- Scheduled task name: LCC Domain Meals Report Automation
- Log path: logs\report-automation.log
- Status path: status\last-run.json

GitHub Target

- Repository: <https://github.com/MarkusGhighi/lcc-domain-meals-report-dataverse>
- GitHub Pages URL: <https://markusghighi.github.io/lcc-domain-meals-report-dataverse/>

Security

Secrets are not committed. .env is ignored by Git. For unattended automation, configure these local values:

```
DATAVERSE_TENANT_ID=<tenant-id>  
DATAVERSE_CLIENT_ID=<app-registration-client-id>  
DATAVERSE_CLIENT_SECRET=<client-secret>  
DATAVERSE_ORG_URL=https://org1afb89f7.crm4.dynamics.com
```

Validation Targets

- Participant count should match Dataverse new_mealparticipants.
- Scan log count should match Dataverse new_mealscanlogs.
- Generated HTML should contain LCC Domain Meals Report.
- index.html should be identical to Meals_Report_py.html after generation.
